Packing:..................................................................................................................................... 10
General Informations:

Features:

- DC12V low-voltage power supply, security and energy efficiency High brightness low power consumption
- LED type: 5050 SMD LED
- LED lighting angle: 120°
- LED quantity: 60LEDs/m
- Operation temperature: -20-50°C
- Life time: 50,000hours
- Water-proof rating: IP20

Benefits:

- Dimmable by using dimmer controller
- Pure color, full-reflected monochromatic light: red, yellow, blue, green, white, etc.
- Low voltage driving for grid pollution-free, suitable for 12V.
- Environment friendly, does not produce any harmful substances.
- Solid-state light source, green and safe, pollution-free.
- Patented design, use of copper material, high flexibility, scalability and strong.
- Frequency close to the frequency of the human eye,
- No visible flicker, low power, natural light color.
- Focus light, the brightness is higher than the conventional light source.

Application:

- Business premises lighting
- Exhibition lighting
- Home Lighting
- Office lighting
- Courtyard lamp, Landscape lamp, Decoration lamp for outdoor lighting

</table>

Notes for Table 1:
1. Parts are tested in pulsed conditions, $T_j = 25^\circ$C. Pulse width is 10 ms at rated test current.
2. İlker Elektronik maintains a ± 10% tolerance on flux measurements.
3. Typical R9 value for 80CRI can be change with 90CRi.
4. Center beam candle power is a calculated value based on Lambertian radiation pattern at nominal test current.

Notes for Table 2:
1. Parts are tested in pulsed conditions, $T_j = 25^\circ$C. Pulse width is 10 ms at rated test current.
2. İlker Elektronik maintains a ± 10% tolerance on Current values.
3. Typical stabilized DC performance values are provided as reference only and are not a guarantee of performance.
4. Voltages must be 12VDC.

**Table 3: Maximum Ratings**

Notes for Table 3:
1. Proper current de-rating must be observed to maintain junction temperature below the maximum.
2. SMD LEDs are not designed to be driven in reverse bias.
3. At maximum reverse current of 10μA/LED.

**Application Notes:**

- Please ensure that when connecting to supply, the correct polarity printed on strip is observed.
- Use of a regulated 12V DC supply is recommended.
- To prevent voltage drop, a power feed at each end is recommended for chains longer than 5 strips in length. For very long lengths it is recommended to connect a power feed after every 5m strips.
- Cut only at designated cut-points, which are positioned every quarter-strip.

**Precautions:**

- Current should be derated in order to keep junction temperature below maximum by reducing power dissipation.
- Current spikes should be avoided especially during power up. It is good practice to initially connect PCB to unactivated supply, then gradually ramp up voltage to desired value.
- Proper management of the thermal path should be observed. Adequate heatsinking of strip should be provided in order to maintain junction temperature below maximum. Proper thermal conduction layers should be introduced at all interfaces to prevent insulating air gaps in the thermal path.
- As with all semiconductor devices, it is good practice to avoid electrostatic discharge (ESD).
